

Freedom Systems Software

Freedom Software is a suite of software applications designed specifically for Local Governments' and Authorities' unique management, control and financial needs. The

suite is modular and flexible allowing you to start with a basic system and add additional features and functionality as needed. Freedom Software is developed using industry standard client-server and web architecture components that enable it to meet your needs both now and in the future. Revenue Management is another product of Freedom Systems Corp., a leader in providing government software, systems and services.

Utility Billing

The Utility Billing System has comprehensive functionality that automates routine billing tasks to speed your processing and improve revenue collection while offering many advanced features of systems costing much more. Utility Billing provides work order and field service management, support for automatic meter readers (AMR), and provides meter, route and installation management, all of which may be downloaded to a Palm® PDA for remote field usage. Remote meter and service order processing increases the organization's effectiveness and provides a real value in total cost of ownership. UB also provides services your customers want, including bank drafts (ACH), credit/debit card processing and a web interface to support customer self-service functionality. The customer service functionality of Utility Billing is also exceptional. From a single screen, access is provided to premise information, current and previous customer history, services offered and used, invoice and payment history, service order history, all unpaid bills, aging, billing and consumption graphs. This kind of information will speed customer inquiries, improve service and empower your customer service team.

Central Cashiering

Central Cashiering is a flexible, customizable cashiering/point-of-sale system that simplifies the entry of payment transactions for all services provided by the organization.

Designed for use by your payment staff, support exists for cash windows with multiple station-ids, operator-ids, and check-out functions to balance your cash drawer. Deposit tickets are created for cash and check items by the system, providing enhanced audit trails. All pending invoices for a payee are available, permitting the collection of multi-jurisdictional amounts with a single payment.

Support also exists for mail payments or from cash processing services. ID numbers can be scanned using barcode readers or searched by customer name. Payment information is updated in source billing systems, and in the Financial Suite. Integration is also available for other financial systems.

Property Tax Billing

The Property Tax Billing System is an optional feature of Revenue Management. It is designed to provide a simple and easy to use billing system with features to speed collections while maintaining excellent controls. The application provides information that assists in managing properties, assessments and delinquent accounts. And like all Freedom Systems, it's a product designed for the Municipal Enterprise with complete integration to General Ledger for financial reporting and Land Management for property management.

Desktop Tool Integration

Freedom Software is developed using Microsoft Infrastructure and with Microsoft Office Links which tightly integrates it into the Microsoft Office Suite including Word, Excel and Access. Any report can be exported into Word or Excel formats with the click of a button, providing a native report format in the destination software. Additionally, Access Wizards, Queries or Reports can be used to create either dynamic reports or additional custom reports as required.
